

Security fencing and electrical works

Hendon Training Centre, Metropolitan Police, Hendon

Highlights

Axis was commissioned to carry out external works to Hendon Training Centre. Minor demolition work was included following the relocation of the existing reception and security modular buildings.

The scope of works included the installation of a new security perimeter fence, security gates and barriers, installation of a Klargeister cesspit/drainage system and associated electrical works. The reception and security cabin buildings, existing gates, barrier, turnstile and electrical control cabinet were carefully dismantled, relocated and then reassembled into a specified location. We also undertook various groundwork, including a tarmac surfaced car park, lining and directional signage.

Specifications

- Security perimeter fencing
- Security gates and barriers
- Electrical works
- Drainage works
- Traffic management system

£245,000 value

8 weeks duration

Axis organised the necessary communication with the appropriate authorities regarding the disconnection, removal and relocation of the services prior to the demolition and reconstruction works. Minimal disruption to the daily operation of the premises was consciously maintained, in order to maintain continuity of the services to the occupied areas whilst the works were taking place. General site clean-up, painting and decorative works completed the project as well as providing new road markings to the site.
