

UPS removal

Financial Institution, Canary Wharf, London

Highlights

Axis completed a £1.7million project at a financial institution in Canary Wharf to create 34 new trading desk positions at their office following the removal of their redundant uninterruptible power supply (UPS) system.

The scope of works included structural alterations, installing electrics and services, painting and decorative works and essential fabric maintenance.

After a larger UPS system was established elsewhere in the building we were awarded the role of Principal Contractor in the removal of the original facility which was situated in the middle of the bank's busy 24-hour trading floor and encased in concrete block walls (built to withstand a bomb blast). To limit the effect on day-to-day business, the project was condensed to a 20 week programme that operated on a 24-hour basis, any work that was deemed to be disruptive took place between 9pm and 5am. In addition to this, we fully enveloped the working area with mock decoration to give the site an external appearance of permanent corridor and office walls.

Specifications

- Office interiors
- Moves and changes; 16 offices and 240 trading positions
- Uninterruptible power supply system removal
- 24-hour working to suit business needs
- Decorative works

£1.7m value
20 weeks duration

On completion of the work we removed the hoarding and carried out the relocation of 16 offices and 240 trading positions over the weekend. This meant that employees could return to their ready-to-work station, in a different location, on the Monday morning without any disruption to their working day.
